## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election without traverse of Group II (claims 8-31) in Paper No. 6 is acknowledged.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 8-14 are rejected under 35 U.S.C. 102(e) as being anticipated by New et al. (6,471,979). New et al. disclose a method producing a stent comprising the steps as claimed (see col. 3, line 26 to col. 7, line 15).

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3731

5. Claims 15-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over New et al. '979. New et al. do not list all the steps for chemical coating methods since New et al. using chemical coating methods that are well known in the art. CVD process is a well-known chemical coating method in the art. Therefore, it would have been obvious to one having ordinary in the art at the time the invention was made to use a known chemical coating method such as CVD process for coating New et al.'s stent so that the coated material adheres to the stent surface better. Using CVD process for coating New et al.'s stent would meet all the limitation as claimed.
